1 Getting Started

Hello World! today I am learning LaTeX. LaTeX is a great platform for writing math. I can write inline math such as $a^2 + b^2 = c^2$. I can also give equations their own space:

$$\gamma^2 + \theta^2 = \omega^2 \tag{1}$$

"Maxwell's equations" are named for James Clarke Maxwell and are as follow:

$$\vec{\nabla}.\vec{E} = \frac{\rho}{\epsilon_0} \qquad \text{Gauss's Law} \tag{2}$$

$$\vec{\nabla}.\vec{B} = 0 \qquad \text{Gauss's Law for Magnetism} \tag{3}$$

$$\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t} \qquad \text{Gauss's Law for Magnetism} \tag{4}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \left(\epsilon_0 \frac{\partial \vec{E}}{\partial t} + \vec{J} \right) \qquad \text{Gauss's Law for Magnetism} \tag{5}$$

Equations 2, 3, 4, 5 are some of the most important equations in Physics.

2 What about Matrix Equations?

$$\begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{nn} \end{pmatrix} \begin{bmatrix} v_1 \\ v_2 \\ \vdots \\ v_n \end{bmatrix} = \begin{matrix} w_1 \\ w_2 \\ \vdots \\ w_n \end{matrix}$$
